

What Makes Us Unique

HMI Project is a design studio specialized in Human Machine Interfaces from Würzburg, Germany. Our interdisciplinary team consists of 20 employees with expertise and extensive experience in design, usability and development. Our work has already been awarded over forty international design and UX awards.

+ Design & Implementation from a Single Source

Eliminate the time and friction of lengthy handovers

+ Industry & Web Design Know-How

We benefit from many years of experience in the most diverse areas

+ Analytical Approach

Understand, evaluate, improve

+ Customized Solutions

Instead of off-the-shelf designs

+ Over 40 International Design Awards

Demonstrate high design quality

+ Transparent Realization and Short Coordination Processes

Through short communication channels and agile project management

+ Hands-On Concepts

Through intensive analysis

+ Interdisciplinary Team

From the fields of design, UX, development and consulting

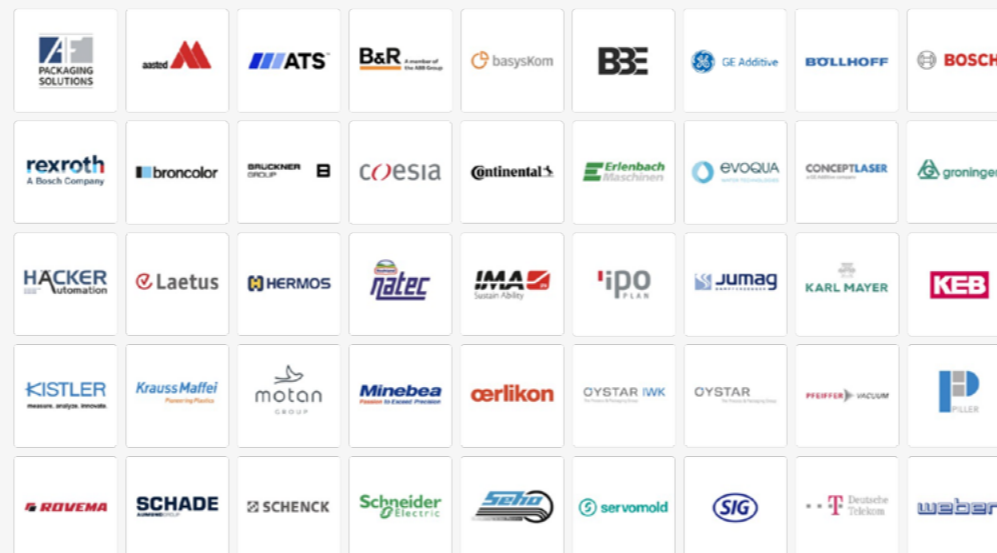

+ High Innovation Potential

Instead of superficial fulfillment of needs

Experienced

Since 2011, we have successfully implemented numerous projects in an industrial context. Among others for

HMI Project

Next Generation Human Machine Interfaces

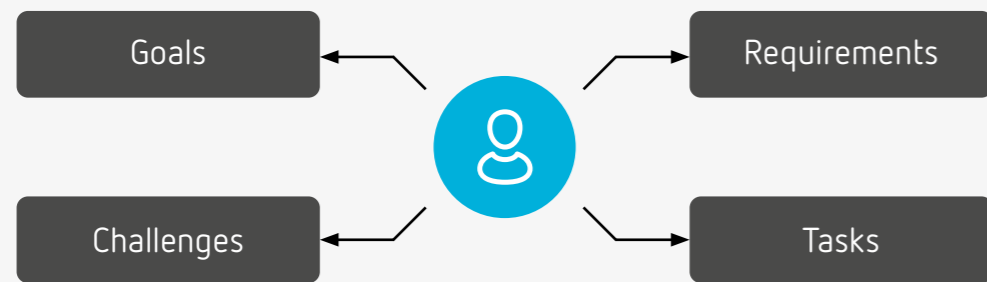

We plan, design and develop innovative Human Machine Interfaces for professional applications.

We create user-friendly software through premium quality design and provide customized solutions which work and inspire.

User Centered Design

Our approach is **user centered** because we want to design products that are **meaningful** and **easy to understand** for the end users. We place them at the center of our design process, research the **usage context** and derive the corresponding **usage requirements**.

Thanks to a methodical approach, the results are **comprehensible** and **comparable** at all times. We create initial **functional prototypes** to test the designs with users at an early stage and repeat this process in iterations to ultimately achieve an optimal **user experience**.

Our well-designed user interfaces **simplify** the user's everyday life, reduce downtime, shorten learning periods and **increase the overall productivity** of your products.

Structured Design Process
